Assignment - 5

The type of statements in shell scripting language :

In unix there are 3 types of statements :

1. sequential
2. control/Jumping/branching
3. Looping/iterative

Control statements :

(i) simple if

(ii) multiple if

(iii) nested if

(iv) else if ladder

(v) case statement

(vi) null if

i) simple if :-

syntax : if [condition]

then commands

fi

eg:-

```
a = 15
if [ $a -gt 10 ]
then
echo "a is greater than 10"
fi
```

ii) simple if else :-

```
if [ condition ]
then command1
else command2
fi
```

eg:-

```
a = 5
if [ $a -gt 10 ]
then
echo "Greater"
else
echo "smaller"
fi
```

iii) else if ladder

syntax : if [condition]

```
then command1
elif [ condition2 ]
then command2
else command3
fi
```

eg:-

```
a = 10
if [ $a -lt 10 ]
then echo "less"
elif [ $a -eq 10 ]
then echo "equal"
else echo "greater"
```

iv) nested if

syntax : if [condition]

```
then
if [ condition ]
then command
fi
fi
```

WAP to check if two no are greater than 10 :

```
a = 20
b = 25
if [ $a -gt 10 ]
then
if [ $b -gt 10 ]
then
echo "Both are greater than 10"
fi
fi
```

```
if [ condition ]
then command
fi
```

```
if [ condition ]
then command
fi
```

null if

syntax :

```
if [ condition ]
then
else command
fi
```

eg:-

```
a = 10
if [ $a -gt 5 ]
then
echo
else
echo "a is less than or equal to 10"
fi
```
